

Symphony OMS-Online makes its debut as the visionary order management layer in the Symphony Logistics Suite. The fundamental of OMS-Online is to monitor all the incoming jobs and to generate the appropriate billing upon job completion. It elegantly synchronizes sub-contracting jobs with an appropriate billing.

In discarding conventional entry forms in favour of a single point of contact for all order entries, one order can be dynamically routed to relevant logistics suite components in WMS-Online, TMS-Online and CMS-Online harmonising inbound and outbound flow and to eliminate any duplication.

Flexible generation of reports and invoices from TMS-Online, WMS-Online and CMS-Online with active customisation to needs, places OMS-Online at the centre stage with its inspired composition. Having multiple invoices for multiple contracts, consolidated reports, standard and ad-hoc billing, OMS-Online synthesises the mix of information to astound with a unified work of rich expressiveness.

OMS-Online's capabilities are augmented by an integrated billing module, abstracting real transactions into consolidated invoices for customer billing. Mapping of customer codes and GL charge codes have been developed for easy collaboration with leading ERP systems and accounting packages. OMS-Online -The productive flexibility to surpass.

Highlights

- Efficient handling of complex billing activity
- Integrated billing system between WMS-Online, TMS-Online and CMS-Online
- Integrated order tracking for WMS-Online and TMS-Online
- Multiple contract billings based on different currencies
- Order volume tracking reporting
- Statistical order management report

Unified Work Flow

- Single order entry for WMS-Online and TMS-Online
- Multiple modes of input for order entry

Order Routing

- Dynamically created respective orders in WMS-Online and TMS-Online based on the job order data

Integrated Order Billing

- Consolidated invoice generation for multiple orders
- Single invoice for warehouse and transport charges

Departmental Billing

- Route and invoice jobs containing multiple orders by department
- Customisable billing currency for each department

Contract Management

- Internal benchmarking
- Measurement of Service Levels
- Sub- contract management

System Interface

- Interfaces with accounting packages or ERP accounting modules
- Mapping of customers to accounting customer codes
- GL code mapping for charge codes

Business Benefits

100% Web-Browser Based

- Intranet or Internet deployment
- Intuitive user friendly interface

Key Performance Indicators (KPI)

- Measure container handling service levels
- Effective internal benchmarking

Reduced Total Cost Of Ownership (TCO)

- Central server architecture
- Future addition of Symphony Logistics Suite solutions

Regional Visibility Online

- Graphical tracking of job orders
- Consolidated reports of WMS-Online and TMS-Online orders

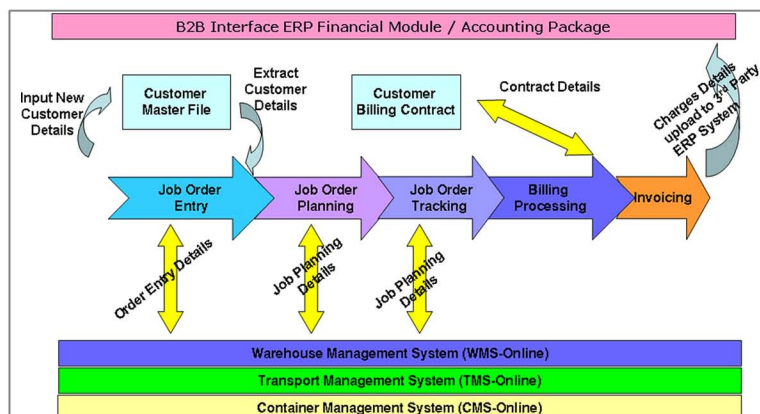

Fast Regional Deployment

- Real-time charts of transportation fleet activity
- Graphical tracking of shipment order status

Real-Time Reporting

- Ease of executive information system reporting
- End-to-end process reporting in PDF & HTML format

OMS-Online Work Flow

OMS-Online Processes:

- Job Order Creation
- Job Order Entry
- Job Order Planning
- Job Order Tracking
- Billing Processing
- Invoicing

B2B Integration:

- Accounting Packages
- ERP / SAP MRP

Symphony OMS-Online has exquisitely harmonized the complex billing system of the various supply chain modules into a centralized billing system. It is engineered such a way that it has made billing to be flexible and synchronized and has eliminated any forms of perplexity and duplications in accounting entries. Symphony OMS-Online - The "missing" piece to the integrated billing solution.

Symphony Logistics Suite

Boon Software produces its finest composition to date with the Symphony Logistics Suite. WMS-Online, TMS-Online, OMS-Online and CMS-Online. A quartet of extraordinary pieces. Beautiful interplay combined to form a truly encompassing solution.

The Symphony Logistics Suite embodies Boon Software's belief that logistics services should be experienced as pure web-based applications. It is inspired by over a decade of success, handling the global demands of warehousing and supply chain logistics.

About Boon Software

For more than 13 years, Boon Software leads in delivering best-of-breed logistics solutions in the Asia Pacific. With domain expertise in over 15 countries, Boon Software's clients include some of the world's leading logistics service providers, in logistics most demanding verticals.

Boon Software's suite of supply chain execution solutions elegantly manages strategic logistics assets across the Internet. These solutions facilitate not only the customer's visibility of assets, but are also streamlined to meet the requirements of the customer's customers.
